EA360 · KULANA

Executive Report

Bank of Ghana

Strengthen regulatory oversight, operational resilience, data governance and EA operationalisation. Multiple reporting channels lack consistent definitions and lineage; payment-system dependencies concentrate resilience risk; technology end-of-support and late architecture reviews slow remediation; overlapping analytical platforms weaken data ownership; some transformation initiatives lack clear capability linkage.

Period
FY2026 Q2

Executive summary

Bank of Ghana (BoG) — FY2026 Q2. Enterprise health 57.7/100; architecture maturity 2.7/5; application health 3.1/5. 12 reviewed/open findings (4 critical); 3 draft(s) excluded from executive exposure. Point-to-point concentration 27.5%. Priority finding: Incomplete regulatory data lineage. Recommended next step is governed remediation via the linked recommendation and roadmap initiative. 2 pending or deferred decision(s) require Architecture / Portfolio Review Board attention. Figures are indicative and derived from synthetic demonstration data.

Enterprise health

Metric	Value
Enterprise health	57.7 / 100
Architecture maturity	2.7 / 5
Application health	3.1 / 5
Strategic alignment	36.9
Transformation progress	17.2%

Strategic alignment

- **Strengthen payment-system resilience** — Protect RTGS and retail settlement paths with monitored failover and governed interfaces.
- **Modernise regulatory data architecture** — Establish consistent definitions, ownership and lineage across supervisory returns.
- **Operationalise architecture governance** — Engage Architecture Review Board early and link initiatives to capabilities.
- **Enhance banking supervision effectiveness** — Improve off-site analytics and examination throughput with trusted data products.
- **Improve financial stability analytics** — Deliver timely systemic-risk indicators to the Financial Stability Committee.
- **Reduce legacy technology exposure** — Contain and retire end-of-support platforms on critical regulatory and settlement paths.
- **Strengthen cyber and operational resilience** — Raise monitoring coverage and identity controls for critical central-bank platforms.

Capability position

Capability	Domain	Maturity	Risk
RTGS oversight	Payment Systems Oversight	—	4.8
Data quality & lineage	Regulatory Data Management	—	4.7
Payment Systems Oversight	Payment Systems Oversight	—	4.6

Capability	Domain	Maturity	Risk
Regulatory returns intake	Regulatory Data Management	—	4.6
Regulatory Data Management	Regulatory Data Management	—	4.5
Settlement finality assurance	Payment Systems Oversight	—	4.2
Enterprise architecture	Technology and Cyber Resilience	—	4.2
Supervisory data products	Regulatory Data Management	—	4.1
Off-site supervision	Banking Supervision	—	4
Technology and Cyber Resilience	Technology and Cyber Resilience	—	4
Platform & operations	Technology and Cyber Resilience	—	3.9
Retail payments oversight	Payment Systems Oversight	—	3.8

Application and technology exposure

Portfolio size 32. Average health 3.1/5. Time-class focus is available in the Application Portfolio.

Application	Criticality	Lifecycle	Time class
Off-site Returns Engine	critical	tolerate	—
RTGS Core	critical	strategic	—
Reserve Management Platform	critical	invest	—
Regulatory Data Lake	critical	invest	—
Cyber Security Operations Centre	critical	invest	—
Identity & Access Management	critical	strategic	—
Legacy Returns Intake	critical	migrate	—
Collateral Management System	critical	invest	—
SWIFT Alliance Gateway	critical	strategic	—
Monetary Policy Decision Support	high	invest	—
Financial Stability Dashboard	high	invest	—
Banking Supervision Portal	high	invest	—

Integration and resilience risks

- Integrations monitored: 40
- Point-to-point share: 27.5% (11 interfaces)
- Critical integrations: —

Priority findings

Finding	Severity	Status
Incomplete regulatory data lineage	critical	Accepted
Inconsistent return definitions across channels	critical	Accepted
Critical payment-system visibility gap	critical	Accepted
Single points of failure on SWIFT/RTGS chain	critical	Accepted
Overlapping analytical platforms with weak ownership	high	Under Review
Legacy returns intake approaching end of support	high	Accepted
Architecture reviews occur too late in delivery	high	Accepted
Deprecated messaging on RTGS path	high	Under Review
Reserve settlement remains brittle SOAP P2P	high	Identified
Integration hub adoption incomplete	high	Accepted

Recommendations

- **Establish regulatory data product catalogue** — approved
- **Rationalise overlapping analytics platforms** — proposed
- **Harden payment-system resilience** — approved
- **Accelerate hub-mediated settlement and returns APIs** — approved
- **Mandate early Architecture Review Board gates** — approved
- **Wrap-and-retire Legacy Returns Intake** — approved
- **Enforce initiative–capability linkage in funding** — proposed
- **Clarify model metadata ownership** — proposed

Decisions required

- **Pending — analytical platform rationalisation** — Pending
- **Deferred — model risk inventory automation** — Deferred

Transformation roadmap

Initiative	Horizon	Quarter	Progress
Regulatory data lineage programme	now	2026-Q4	32%
Analytics platform rationalisation	next	2027-Q1	8%
Payment-system resilience hardening	now	2026-Q4	22%

Initiative	Horizon	Quarter	Progress
Hub settlement & returns API wave	now	2027-Q1	18%
Architecture governance operationalisation	now	2026-Q3	40%
Legacy returns intake containment	next	2027-Q1	15%
Portfolio linkage remediation	now	2026-Q4	12%
Digital workplace refresh	later	2027-Q3	5%
Reserve settlement API mediation	later	2027-Q2	3%

Expected value and risk reduction

Indicative outcomes are derived from initiative value statements and linked findings. They are not guaranteed financial returns.

- **Regulatory data lineage programme**: Trusted supervisory datasets
- **Analytics platform rationalisation**: Single trusted analytics path
- **Payment-system resilience hardening**: Settlement availability toward 99.95%
- **Hub settlement & returns API wave**: Reusable critical APIs
- **Architecture governance operationalisation**: Early design assurance
- **Legacy returns intake containment**: Supported intake path

KPI outlook

KPI	Current	Target
Critical products with complete lineage	38 %	95 %
Return definition conflicts open	27 count	3 count
Shadow analytics publishes	14 count	0 count
RTGS oversight visibility	96.2 %	99.9 %
Settlement recovery time	37 minutes	10 minutes
Critical interfaces via hub	22 %	80 %
Active critical P2P integrations	9 count	2 count
Critical programmes with early ARB	36 %	100 %
Funded initiatives with capability links	71 %	100 %
EOS critical applications	3 count	0 count

Evidence limitations

- Evidence coverage varies by finding; disputed or incomplete items reduce confidence.

- AI-assisted narratives are grounded in the active tenant only and remain human-reviewed.
- Metrics are prototype-derived and may not reconcile to operational finance systems.

Synthetic-data disclaimer

Synthetic scenario — not a Bank of Ghana assessment. Illustrative demonstration data only; not an official BoG architecture, inventory, or risk register.

Synthetic demonstration data — not supplied or validated by the named institution.
